

Personalized learning provides students is an educational approach that aims to customize learning for each student's strengths, needs, skills, and interests. When optimized each student helps to create a personalized learning plan that's based on what they know and how they want to continue to learn.

For teachers and caretakers of young children we suggest that students (and families if appropriate) meet to design a personalized learning plan together. This can take place virtually if needed. The goal is for families, children, and educators to walk away with a plan for learning.

The key to this is to think about what each student needs to work on, what their interests are, and how they can reach their own goals through developing a plan with adults that care about them.

The following provides a template that can be completed and shared out with families (or families can share with educators if they are initiating). The form is written in first person for the student.

Questions to think about for each child:

- What are their strengths?
- What do they need to develop further?
- What are their interests?
- What can you provide to assist them in further developing skills?
- What resources can you share that can further developing their knowledge and engage their curiosity?
- How could this child best document their learning?
